Digitalization as crucial enabler for future production

—

i4.0@BSH

2022-07-21
Florian Karl (GPD-BED)

i4.0@BSH

Agenda / main topics

- Strategy i4.0@BSH
- Organization of i4.0@BSH
- IT Architecture and exemplarily solutions
- People and enablement

Vision

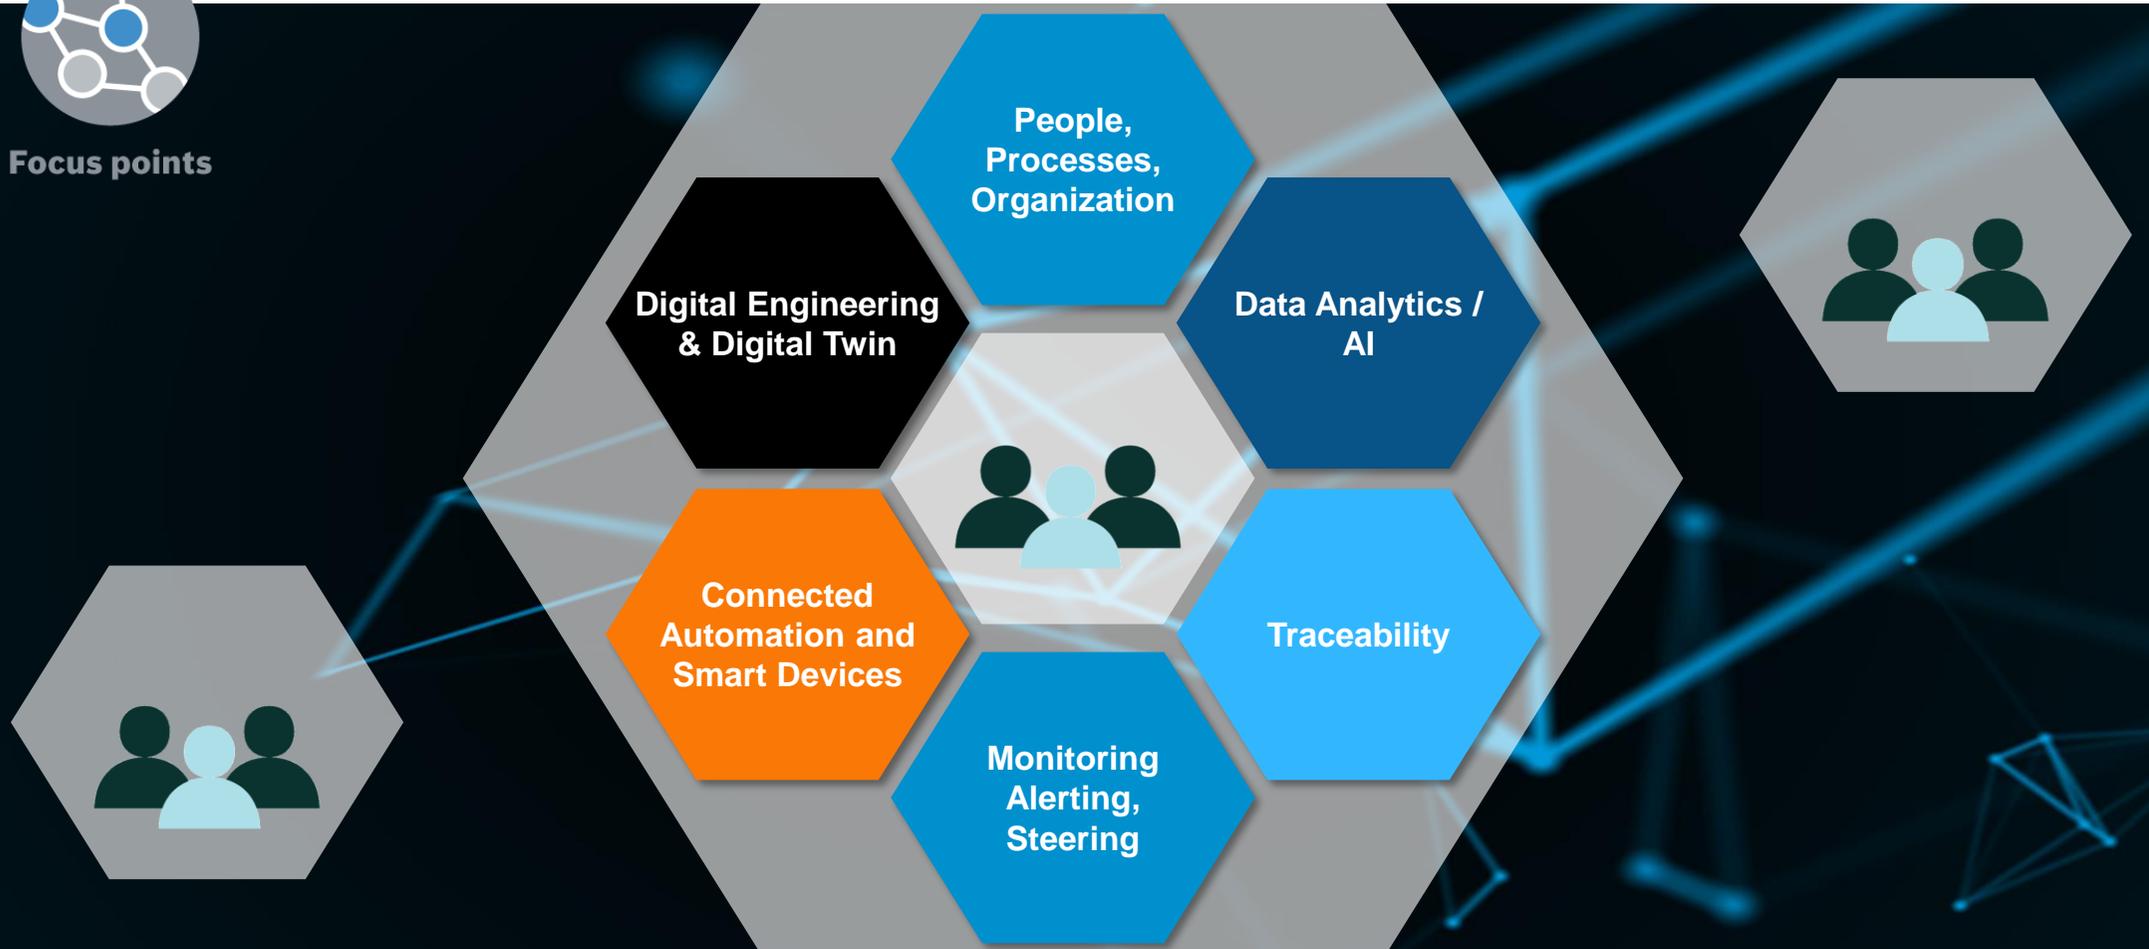

**i4.0@BSH drives the
digital transformation
to a competitive and user centric
smart manufacturing
boosting operational excellence
across all value streams*.**

i4.0@BSH – Focus Points

i4.0@BSH is based on 6 Focus Points to drive digitalization

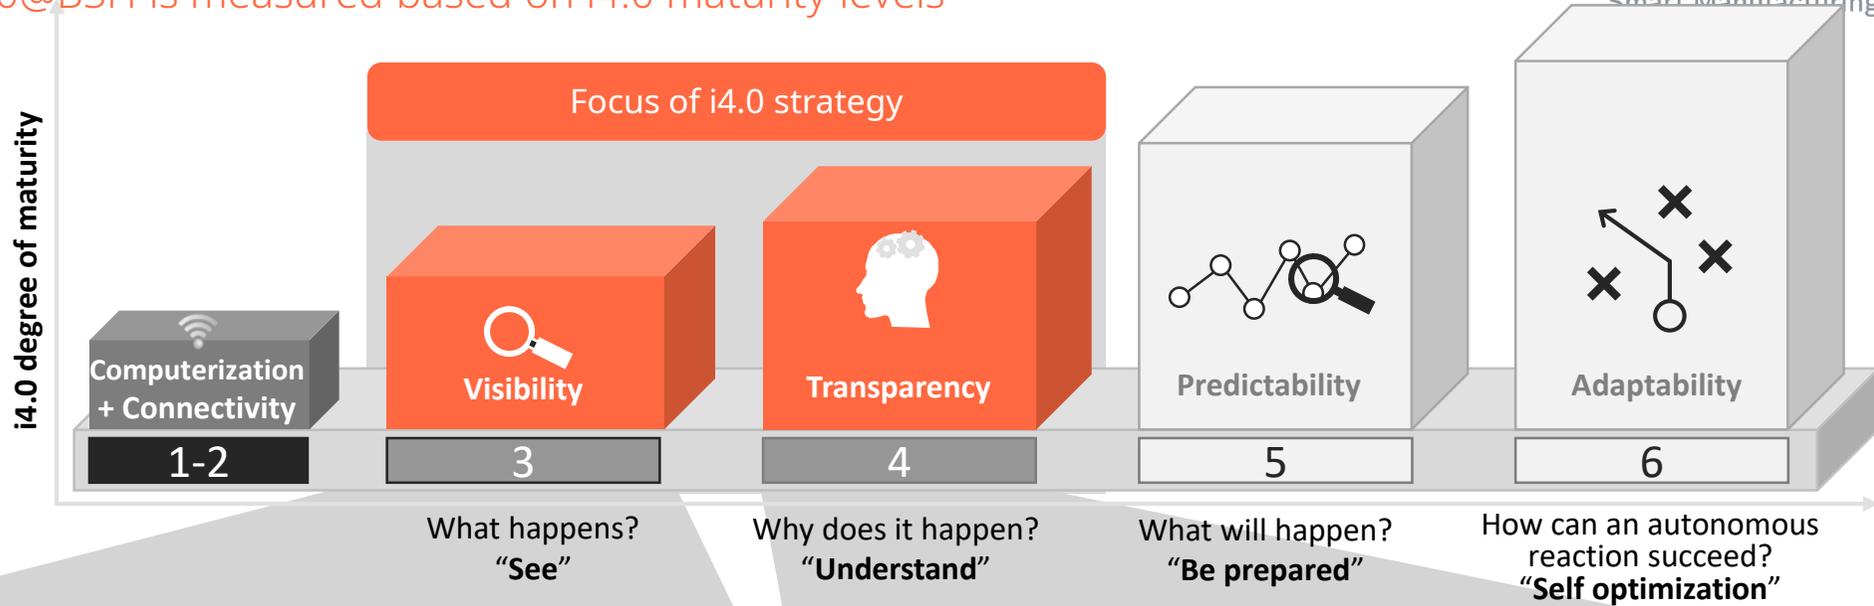

Focus points

i4.0@BSH – Progress Measurement

Progress of i4.0@BSH is measured based on i4.0 maturity levels*

All relevant data is collected and linkable in an automatic way (see what is happening „live“).

Target 2025: rolled out throughout BSH

Deviations from expected results are automatically analyzed for probable root causes based on past data.

Target 2025: tested in selected Lighthouse factories

How are i4.0@BSH and BPS@BSH connected?

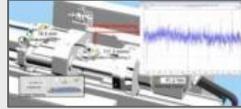

i4.0@BSH increases in BPS transparency and provides solutions for continuous improvement

Transparency

Data Analytics

Condition Monitoring Syst.

Tool Mngt. / IoT Gateway

Prod. Perfor. Manager (PPM)

...

Improvement

Fleet Mgt. Intralogistics

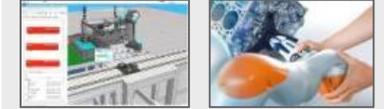

Mobile Plant Maintenance

Digital Support for Workers

Digital Robots Planning

...

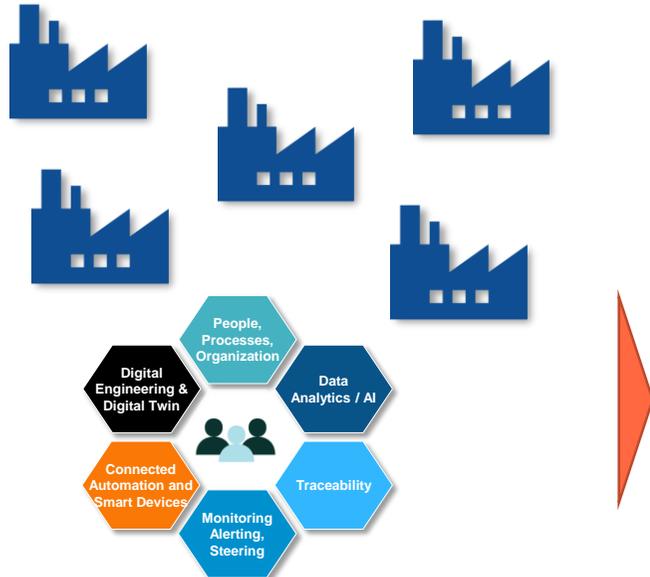

BPS System CIP Approach

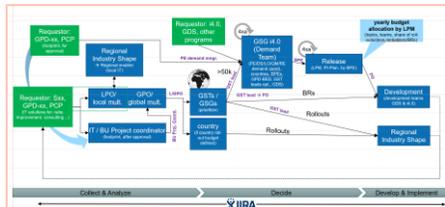

Connection of Customers to Dev Teams to request roll-outs / developments

Requested developments of new features need to be aligned in global roadmaps (agile set-up)

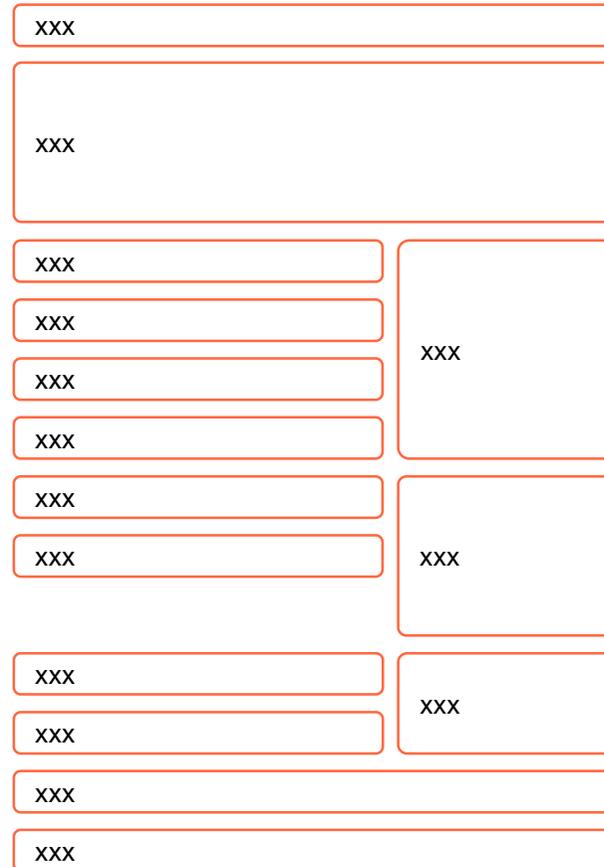

„Customer“ via Specialist Teams

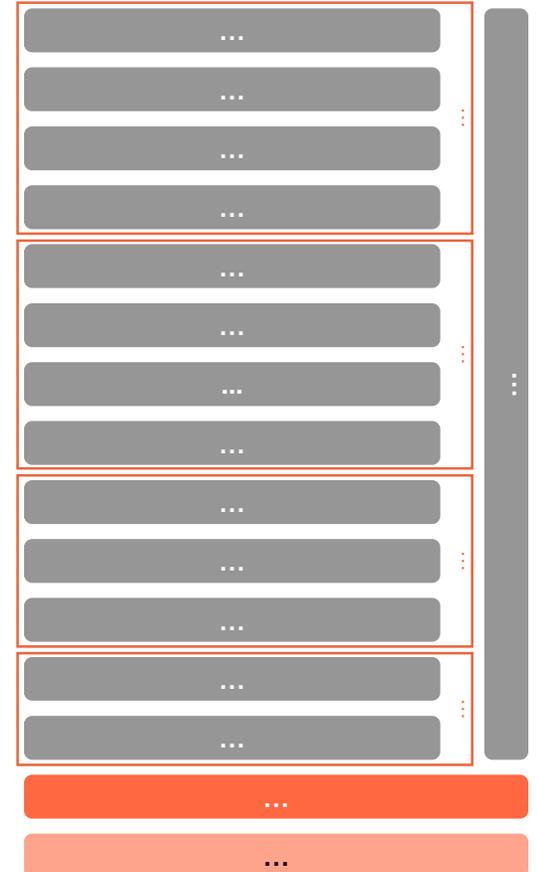

underlying demand process

Business Process Engineer („BU PO“)

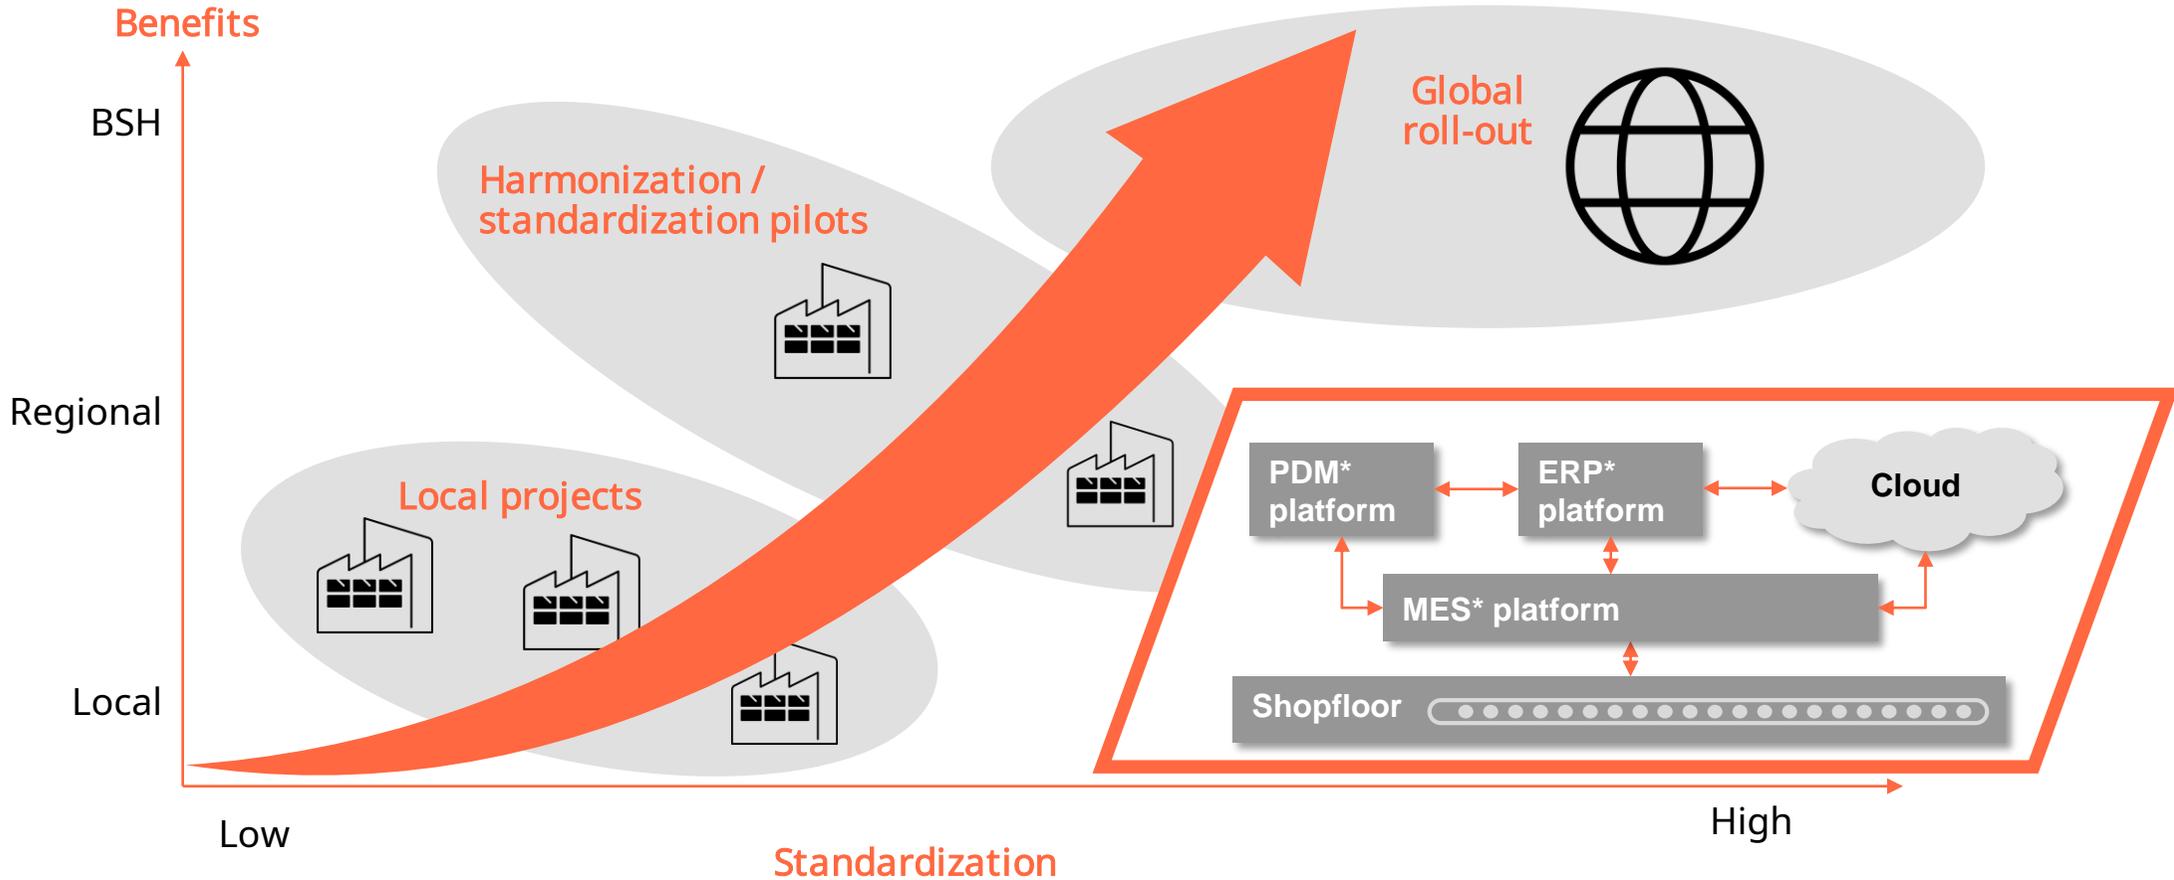

„Development“ Teams (BU & IT)

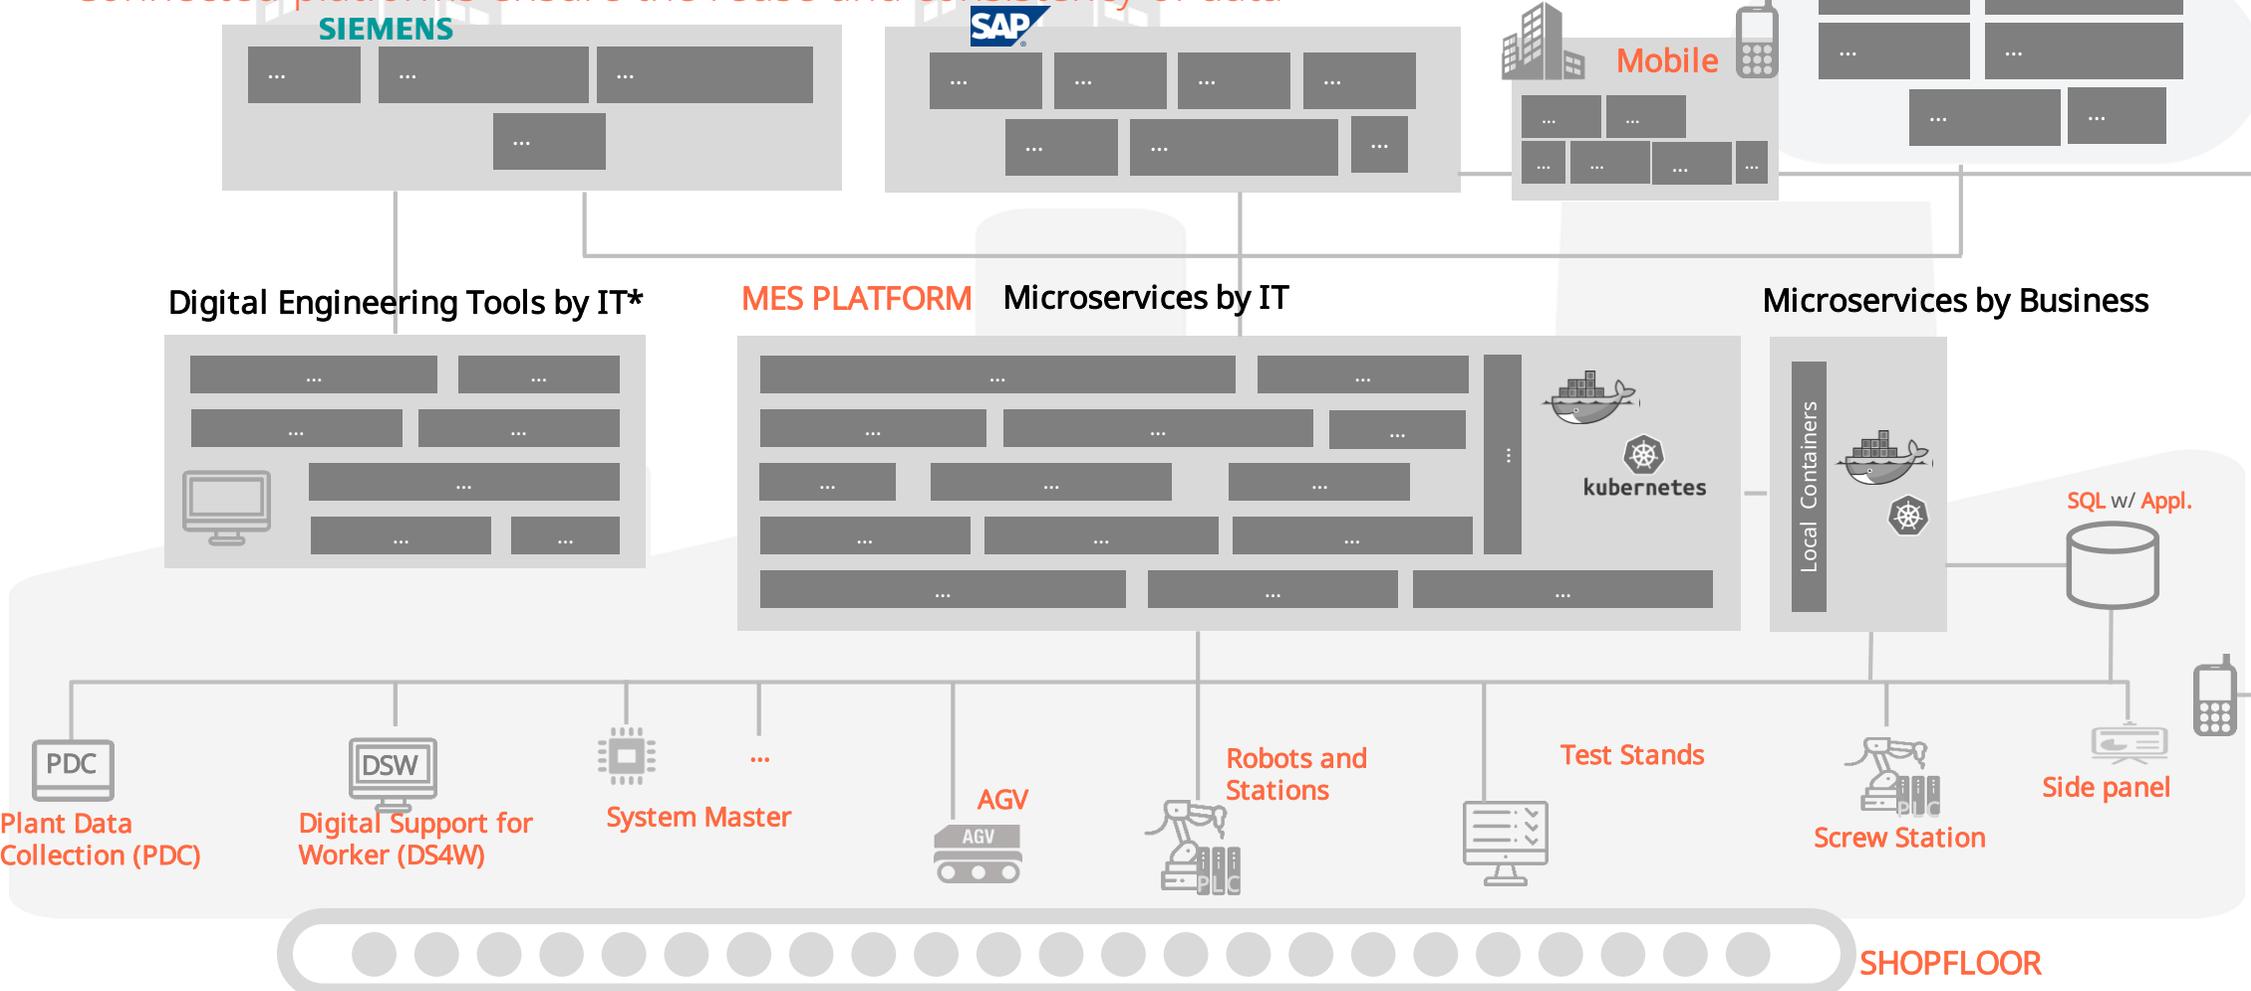

We reach our target picture based on our platform strategy

Successful local activities are standardized for beneficial scaling

We reach our target picture based on our different platforms

Connected platforms ensure the reuse and consistency of data

Digital Engineering @ BSH

Powerful system integration where we describe our plants and products in one central system

Product Development

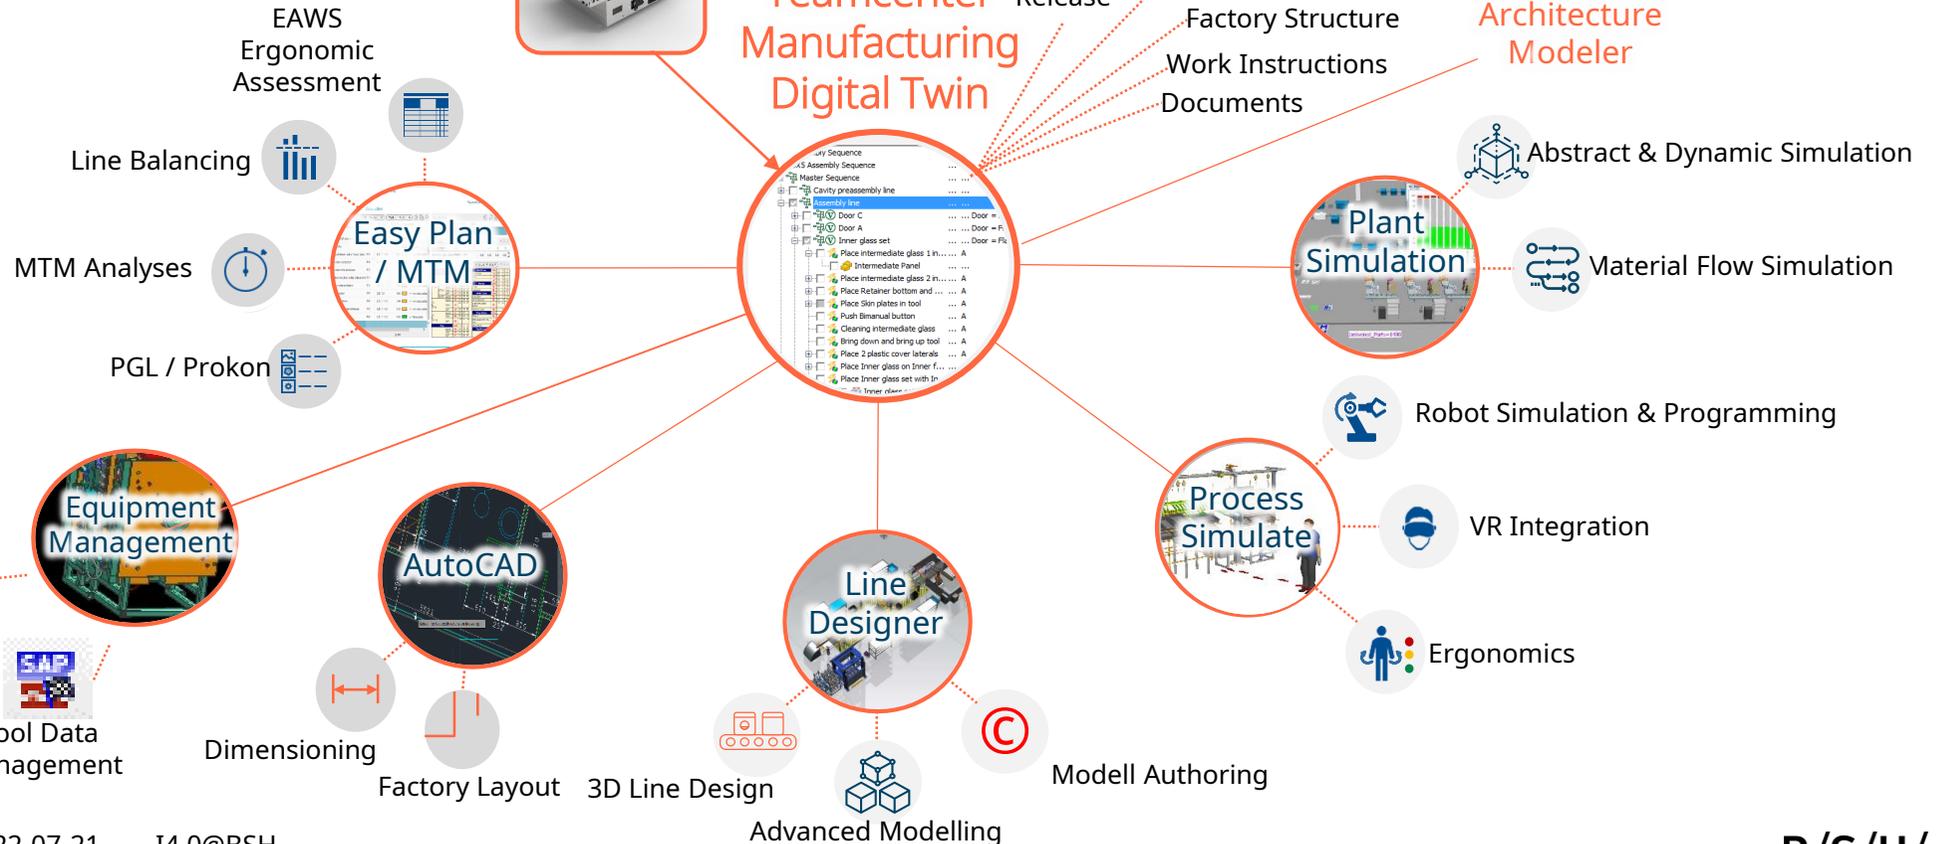

SIEMENS Teamcenter Manufacturing Digital Twin

Change and Release

Parameter
Factory Structure
Work Instructions
Documents

Architecture
Modeler

Digital Support for Workers (DS4W) & Augmented Assembly Assist (A³)

Huge value due to connected systems and re-use of data

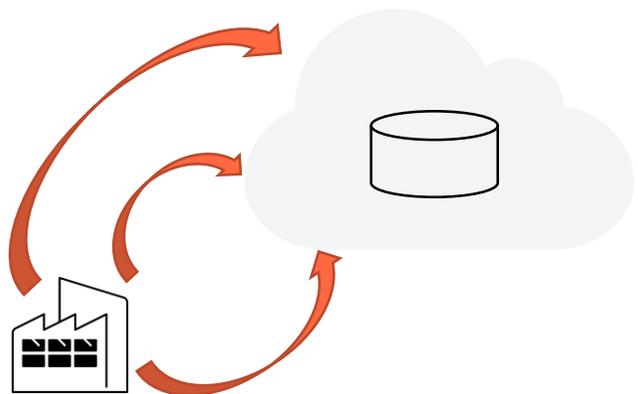

DS4W as standard tool in numerous BSH factories

A³ developed in BSH i4.0 Lighthouse Factory Dillingen

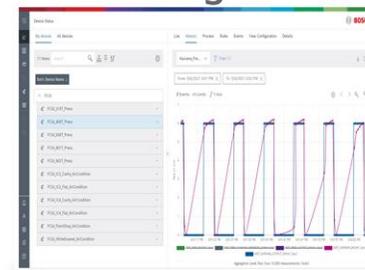

Analytics Platform in Cloud with advanced analytics at scale

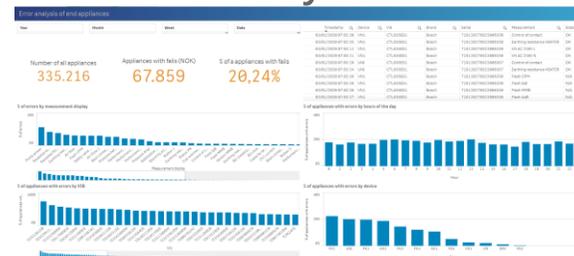

For analytics at scale & data driven decisions analytics pillars access same data fed by standard pipelines

Process Monitoring

Self-service Analytics

Data Science & AI

We reach full transparency of Data & Information flows in our factories

Implementation of Data & Information Value Stream (DVS/IVS) into our BSH production landscape **Smart Manufacturing**

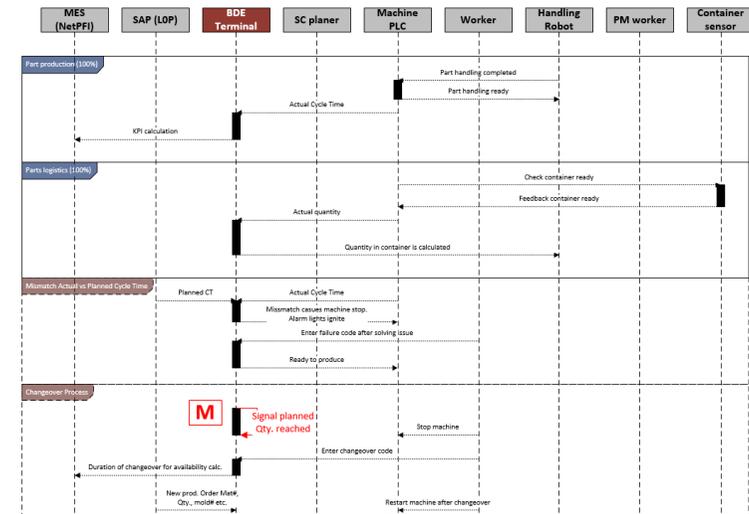

DVS as part of factory reporting

	Data			
	Paper	QR- / Barcode	Employee	Sheet

IVS (e.g. for purchasing of equipment)

People are a key Focus Point of i4.0@BSH

Skilling up to maximize the full potential is driven via the global multipliers network

„i4.0 Driver“

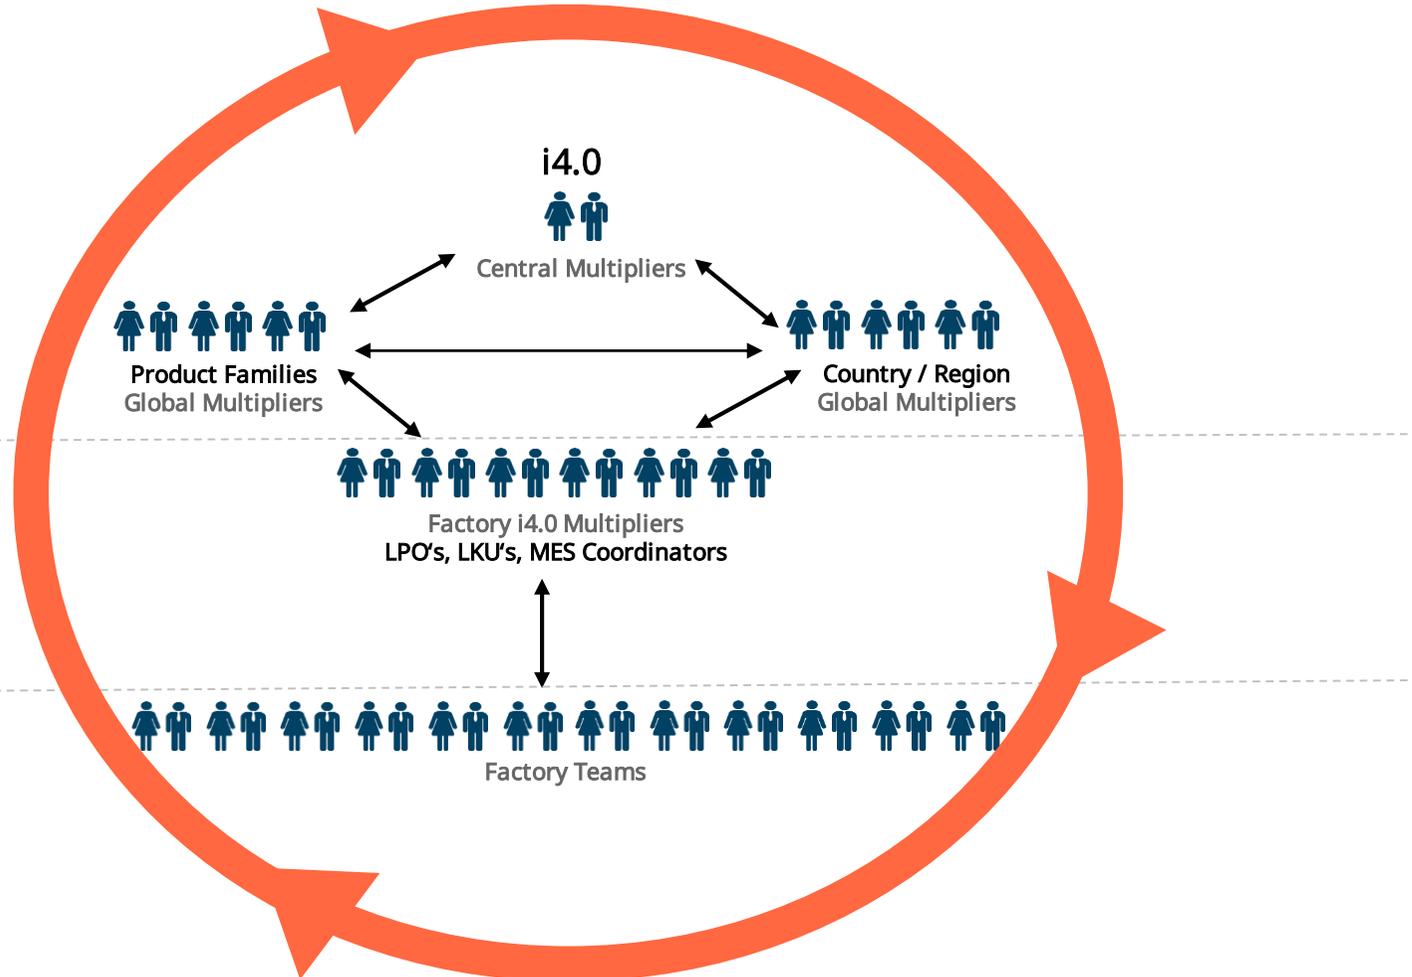

Drive modernization of factories with i4.0

“i4.0 Implementer”

Define & implement i4.0 solution

“i4.0 user”

Work in an i4.0 environment

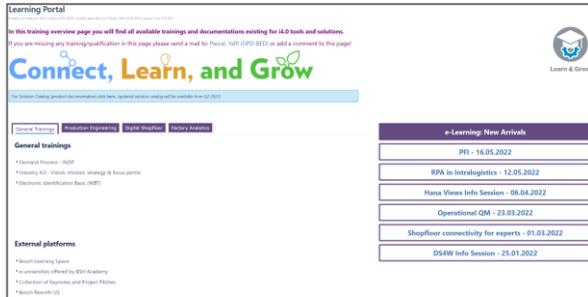

People are a key Focus Point of i4.0@BSH

Numerous global / local enablements are provided

Global focus, e.g.

„general“ enablement

Common trainings and “topic talks”

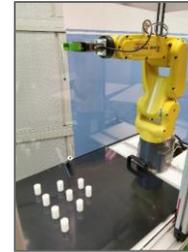

i4.0 Learning Portal und Calendar

Local focus, e.g.

Enablement of local requirements (e.g. specific techs.)

InnoLabs

Specific trainings

Creation of Learning Journeys
